

## *Instructions for Creating Assembly Pictures for the ASK System*

- 1) Please create two views for the ASK System using the following vantage points:

- 2) If the drawing is detailed and it does not give the viewer a sense of what the components are, please provide a close-up snapshot of a portion of it. For example:

- 3) Please crop the picture so that the actual component fills up most of the picture and there are not a lot of “dead spaces” in the picture.
- 4) Please make sure that the resolution is at least 300dpi.
- 5) Please make sure that the file is saved in a .jpg format.
- 6) Final picture dimensions should be about 6” x 6” or so. If the pictures are cropped, the height and width will vary, but keep the final images somewhere around this size.
- 7) Place the created images in the top portion of every Bill of Material and Drawing list uploaded to the ASK system.
